SHOREWOOD

Thoughtful Design

The Shorewood Console is our value priced pontoon boat console. This sturdy console is designed to meet the needs of your entry level or compact pontoon boat product line. Each Shorewood console is constructed from fiberglass reinforced, acrylic capped ABS. This construction produces a console that has an expensive looking outer shell that is easy to maintain and stands up to years of exposure to the elements. The optional dash panel includes 4 lighted chrome bezel gauges for fuel, trim, speedometer and a tachometer plus a 12-Volt accessory outlet. The standard switch panel is loaded with 5 switches and integrated fuses plus a push-to-choke ignition switch. Also included with the panel sets is an ABYC compliant electrical harness that terminates into a 16-pin Packard GT280 connector for easy integration into your electrical harness.

When you order your electrical harness from Marine Electrical Products, you will be guaranteed a plug-and-play product lineup that will make outfitting your boat quick and easy. Our boat-in-a-box packages insure that every vessel is wired with the appropriate wire gauge and connectors and will conform to ABYC specifications.

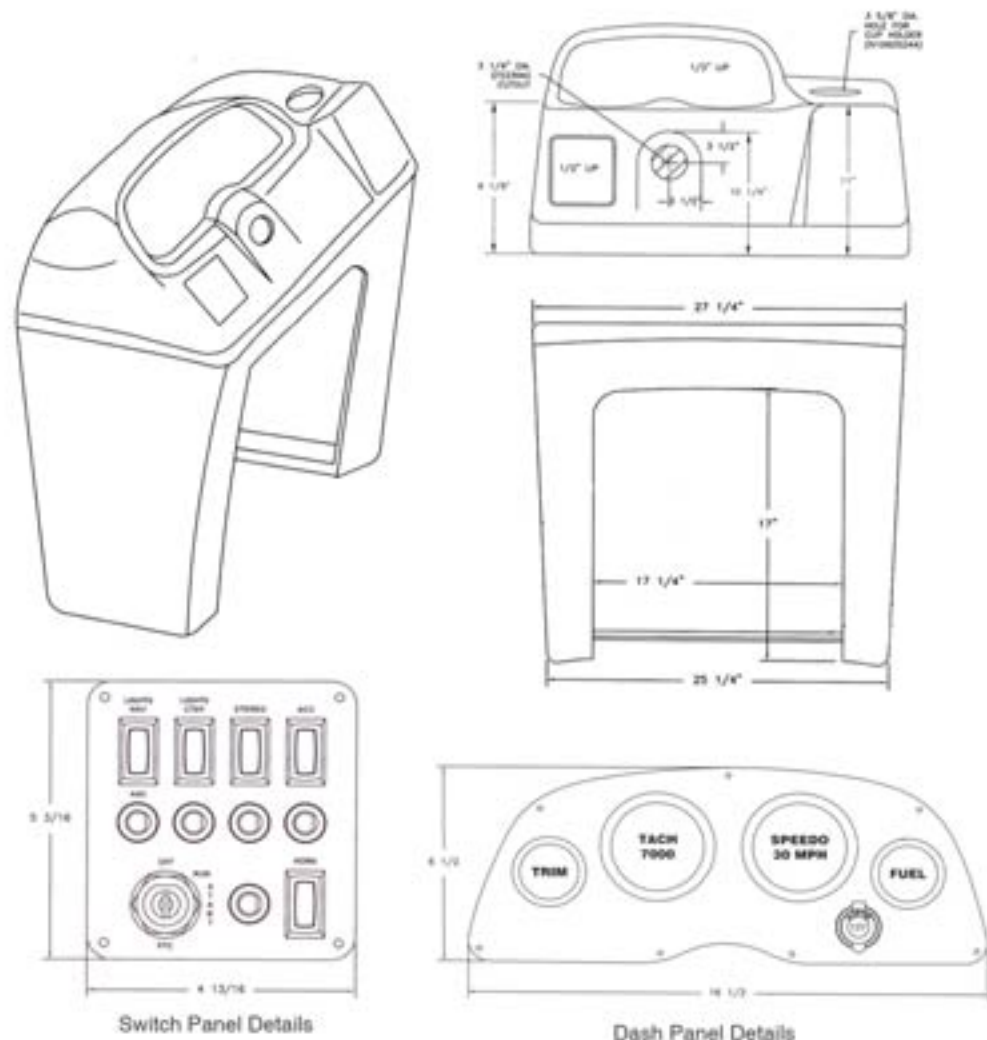

The Shorewood shown in Bone acrylic with Oxford Burl panel material, Teleflex Lido gauges, Mini rocker switches and integrated fuses.

Prices start at \$325 for the basic Shorewood console.

Unit pictured with optional dash panel, gauges, switches, breakers, and electrical harness interface retails for \$525.
